

Our team at Nibiaa Devices would like to thank you for providing with us the opportunity to submit our Pilot Project Proposal regarding "Precision Agricultural Solutions related to Soil and Environmental Monitoring IoT Use-Cases."

Our main goal for this pilot project is to demonstrate our technology and help & assist Dalai's District agricultural fields by providing them with technology based solution which will save them upto 30% of the input costs in the form of Fertilizer, water saving with sensors and actuators and make it easy to monitor Agricultural farms in remote hill areas with the help of Mobile App and Web-Platform.

Our Software and Hardware solution will help farmers in remotely monitoring weather and Environmental conditions, check soil moisture and temperature and perform soil testing on the field mobile phone. Application of the latest advancement in precision agriculture technology will place our state in league of some of the few states which has implemented such a solution helping dramatically increase the yield, productivity and doubling of our horticulture farmer's income.

Along with this letter, we are providing a detailed Project proposal along with the background of our Company, technology involved, features and costing related details for our software and hardware solution.
